

DevOps & Cloud Deployment – Module 1 Exercise

Hands-on Exercise No. 1

Course: DevOps & Cloud Deployment

Module: Linux & Version Control Basics

Total Marks: 10

Due Date: 13/06/2026

Instructions

Prepare your solution in MS Word.

Submit in .doc or .docx format.

Late or copied submissions will not be accepted.

Learning Outcome

After completing this exercise, you will be able to:

- Navigate Linux file system using basic commands.
 - Manage files and directories in Linux.
 - Use Git for version control.
 - Commit and push code to GitHub.
-

Problem Statement

You are working as a DevOps Engineer Intern for a software company. The client wants you to demonstrate Linux basics and Git version control by setting up a small project repository.

Task Requirements

Open a Linux terminal (Ubuntu or similar).

Perform the following tasks:

- Create a directory named `devops_project`.
- Inside it, create a file named `readme.txt` containing a short description of the project.
- Use Linux commands such as `ls`, `pwd`, `cat`, and `rm` to demonstrate file navigation and management.
- Initialize Git in the project directory using `git init`.

- Create a GitHub repository and connect it with your local project.
 - Add, commit, and push the `readme.txt` file to GitHub.
-

Take Screenshots of

- Linux commands execution and outputs.
 - Git initialization and commit history.
 - GitHub repository showing uploaded file.
-

Submission Guidelines

Upload your .docx file with terminal screenshots, GitHub repository link or screenshots, and explanations via LMS.
