

DevOps & Cloud Deployment – Module 4 Exercise

Hands-on Exercise No. 4

Course: DevOps & Cloud Deployment

Module: Cloud Deployment

Total Marks: 10

Due Date: 19/06/2026

Instructions

Prepare your solution in MS Word.

Submit in .doc or .docx format.

Late or copied submissions will not be accepted.

Learning Outcome

After completing this exercise, you will be able to:

- Deploy applications to cloud platforms (AWS, Azure, or Heroku).
 - Configure environment variables securely.
 - Use cloud services for scalability.
 - Monitor deployed applications.
-

Problem Statement

You are working as a Cloud Engineer for a startup. The client wants their Node.js application deployed to the cloud so it can be accessed globally. Your task is to deploy the app and configure it for production.

Task Requirements

Create a simple Node.js application (`app.js`) with a route that returns:
“Hello Cloud!”

Choose any one cloud platform:

- AWS Elastic Beanstalk
- Azure App Service
- Heroku

Deploy the application to the selected platform.

Configure environment variables such as:

- PORT
- DB_URI (if applicable)

Verify the deployment by accessing the live application URL in a browser.

Set up monitoring using the available platform tools such as:

- AWS CloudWatch
- Azure Monitor
- Heroku Logs

Take Screenshots of

- Deployment process steps.
- Environment variable configuration.
- Live application running in browser.
- Monitoring dashboard or logs output.

Submission Guidelines

Upload your .docx file with deployment steps, screenshots, live URL, and explanations via LMS.
