

Module 2 – Wireframing & Prototyping

1. Wireframing Basics

What is Wireframing?

Wireframing is a basic visual blueprint of a digital product that shows layout and structure without detailed design elements.

Why Wireframing is Important

- Defines structure before design
- Saves time in development
- Helps communicate ideas clearly

Key Features

- Simple layout
 - No colors or detailed styling
 - Focus on placement of elements
-

2. Low Fidelity vs High Fidelity

Low Fidelity Wireframes

Simple sketches that show basic structure and layout.

High Fidelity Wireframes

Detailed and polished designs close to final product.

Differences

- Low fidelity = rough idea
- High fidelity = detailed design

Key Purpose

- Low fidelity for planning
 - High fidelity for final validation
-

3. Prototyping Tools

What is Prototyping?

Prototyping is creating an interactive model of a design to simulate user experience.

Popular Tools

- Figma
- Adobe XD
- Sketch
- InVision

Why Tools Matter

- Faster design workflow
 - Easy collaboration
 - Real-time feedback
-

4. User Flows

What is a User Flow?

A user flow shows the path a user takes to complete a task in an application.

Example Flow

Login → Dashboard → Settings → Logout

Why User Flows Matter

- Improves navigation design
 - Reduces confusion
 - Enhances user experience
-

5. Interactive Prototypes

What are Interactive Prototypes?

Interactive prototypes simulate real app behavior with clickable elements.

Benefits

- Real user experience testing
- Better design validation
- Early feedback collection

Key Features

- Clickable buttons
 - Screen transitions
 - Simulated interactions
-

6. Key Concepts to Remember

- Wireframes define structure
 - Low fidelity is simple, high fidelity is detailed
 - Prototypes simulate real interactions
 - User flows map user journeys
 - Tools like Figma help speed up design
-

7. Summary

Wireframing and prototyping are essential steps in UI/UX design. They help visualize structure, test user journeys, and refine designs before development begins, ensuring better usability and experience.
